## Abstract of JP 2003273890 (A)

**PROBLEM TO BE SOLVED:** To simplify a setting work for a terminal for easily acquiring the address of a terminal managing device necessary to register the terminal with the terminal managing device by means of a terminal. **SOLUTION:** A terminal managing device address acquiring system previously writes the address of the terminal managing device with a network address acquiring control unit. A network address converter, disposed between the terminal and the terminal managing device, receives the address of the managing device in addition to the network address, when the alignment of the network address is requested to the control server. The terminal monitors the address of the managing device, in addition to the network address when the alignment of the network address is requested to the server and acquires the address of the managing device. .
